

IN THE CLAIMS:

The text of all pending claims, (including withdrawn claims) is set forth below. Cancelled and not entered claims are indicated with claim number and status only. The claims as listed below show added text with underlining and deleted text with ~~strikethrough~~. The status of each claim is indicated with one of (original), (currently amended), (cancelled), (withdrawn), (new), (previously presented), or (not entered).

Please CANCEL claims 1, 4-6, 8, 9, 12-14, 16, 17, 20-22 and 24; AMEND claims 7, 15 and 23; and ADD new claims 25-26 in accordance with the following:

Claims 1-6 (canceled).

7. (currently amended) An electronic mail apparatus ~~according to claim 5, wherein the~~ comprising:

a storing unit storing information in response to a destination of an electronic mail, the information indicating whether a sentence to be included in the electronic mail is text-displayable based on text data and a character code system used at the destination of the electronic mail;

a judging unit judging whether to form image data of a text file corresponding to the sentence based on the information stored in the storing unit;

an image data forming unit forming the image data of the text file corresponding to the sentence when the judging unit judges that the image data of the text file corresponding to the sentence should be formed;

a transmission unit transmitting the electronic mail with the image data of the text file corresponding to the sentence to the destination of the electronic mail;

a translation unit translating the sentence into a language used at the destination when the sentence is expressed by characters written in a language different from the language used at the destination of the electronic mail, the image data forming unit ~~forms~~ forming the translated image data of the translation results expressed by characters written in the language used in at the destination when the display control unit cannot text-display the characters written in the language used in at the destination of the electronic mail; ~~and the electronic mail apparatus further comprises~~

a synthesizing unit forming synthesized image data obtained by combining image data formed by the image data forming unit and corresponding to the input sentence with the translated image data, the synthesized image data including the image data of the sentence described by at least two lines and the translated image data of the translation results of the

sentence inserted between the at least two lines, the transmission unit ~~transmits~~ transmitting the synthesized image data to the destination of the electronic mail.

Claims 8-14 (canceled).

15. (currently amended) An electronic mail transmission method ~~according to claim 13,~~ comprising:

receiving a sentence serving as contents of an electronic mail;

reading out information in response to a destination of the electronic mail from a storing unit, the information indicating whether the sentence is text-displayable based on text data and a character code system used at the destination of the electronic mail;

judging whether to form image data of a text file corresponding to the sentence based on the information read out from the storing unit;

translating the sentence into a language used at the destination when the sentence is expressed by characters written in a language different from the language used at the destination of the electronic mail; wherein, in the

forming the image data of the text file corresponding to the sentence when it is judged that the image data of the text file corresponding to the sentence should be formed, and translated image data of the translation results expressed by characters written in the language used in at the destination, is formed when it is determined that the characters are not written in the text-displayable language used in at the destination of the electronic mail; and the electronic mail transmission method further comprises

forming synthesized image data obtained by combining the formed image data corresponding to the sentence with the translated image data, the synthesized image data including the image data of the sentence described by at least two lines and the translated image data of the translation results of the sentence inserted between the at least two lines; and in the

transmitting the electronic mail with the synthesized image data, is transmitted of the text file corresponding to the sentence to the destination of the electronic mail.

Claims 16-22 (canceled).

23. (currently amended) A computer-readable recording medium which records ~~the a~~ program that when executed controls a computer to perform a method comprising:

receiving a sentence serving as contents of an electronic mail;
reading out information in response to a destination of the electronic mail from a storing
unit, the information indicating whether the sentence is text-displayable based on text data and a
character code system used at the destination of the electronic mail;
judging whether to form image data of a text file corresponding to the sentence based on
the information read out from the storing unit;
translating the sentence into a language used at the destination when the sentence is
expressed by characters written in a language different from the language used at the
destination of the electronic mail; wherein, in the
forming the image data of the text file corresponding to the sentence when it is judged
that the image data of the text file corresponding to the sentence should be formed, and
translated image data of the translation results expressed by characters written in the language
used in at the destination, is formed when the characters written in the language used in the
destination of the electronic mail cannot be text-displayed; and the program further comprises
forming synthesized image data obtained by combining the formed image data
corresponding to the sentence with the translated image data, the synthesized image data
including the image data of the sentence described by at least two lines and the translated
image data of the translation results of the sentence inserted between the at least two lines; and
in the
transmitting, the synthesized image data is transmitted to the destination of the electronic
mail.

Claim 24 (canceled).

25. (new) A method of generating image data from text data in an electronic mail message, comprising:

translating a sentence in the text data from a first language that is not used at the destination of the electronic mail into translated text data in a second language that is used at the destination of the electronic mail; and

forming image data of the sentence from the text data, including translated image data of the translated text data inserted between two lines of the sentence.

26. (new) A method as recited in claim 25, wherein the first language uses characters that are not used in the second language.
